

MicroPower Guard: Nature's Home Professional installation required. This electronic 1" Polarized Media Air Cleaner has a multiple-pass efficiency of 97% at .3 microns. It will remove 40% of volatile organic compounds (VOC) and odors. Easy to maintain by changing the replaceable media within the metal frame three times per year. Excellent control of larger and submicronic particles and allergens. Because it is electro-statically charged, it increases in efficiency as it loads. Like your television set, it attracts the smallest particles because it is electrically charged. Excellent air flow because of its long strain fiber and porous carbon media. Included with each air cleaner is a 24-volt power supply with very low consumption. Used extensively in commercial air cleaning applications such as hospitals, labs, nursing homes, casinos, bars, river boats, dentist offices and office buildings. The MicroPower Guard Air Cleaner is a proven commercial technology brought to the residential market.
